

Kit SigFox communication board for Raspberry Pi (DIN enclosure included)

This SigFox communication board is an extension board for Raspberry Pi card. It will enable you to use the SigFox network to transmit any data very simply.

The RPiSigFox card for Raspberry Pi is SigFox Ready Certified Class 0 (the best one), that is to say with the best capabilities to communicate with the network. It is design and produced in France in our office and facilities.

The card is supplied with:

- Tabletop or DIN rail housing
- front panel machined with antenna connector
- 1/2 wave articulated antenna
- python script to simplify sending data
- One year subscription to SigFox network (140 messages / day) in option
- Access to your data via the Sigfox portal
